Gd print make files - How to use xdcmake for batch processing ? how to create a custom package for distribution with adobe xdcmake? how to create a custom package for distribution with adobe xdcmake? how to get it, and more...Q: Problems with JSF Ajax I'm trying to implement an Ajax submission of data in my JSF project and I ran into problems. I have an inputfield to which I've assigned a listener (note that I've deactivated the Submit button to make this simpler to understand) It contains a valueChanged() method which simply calls an AjaxSubmitBehavior on the object that has the @ManagedBean method public void nameChanged(ValueChangeEvent event) { String name = (String) event.getNewValue(); try { FacesContext.getCurrentInstance().addCallbackParam("name", name); getAjax(getUIComponentId(), "_inconsistencies").ajaxSubmit(new CallbackParameter[] { new CallbackValueParameter("name", name) }); } catch (Exception e) { logger.error("Error when submitting name", e); } } The getAjax() method I use to do the actual submission

```
public static AjaxSubmitBehavior getAjax(UIComponent uic, String f) { AjaxSubmitBehavior ajax = (AjaxSubmitBehavior)
    uic.getClientBehavior(AjaxSubmitBehavior.ID); if (ajax == null) { ajax = new AjaxSubmitBehavior();
    uic.getChildren().add(ajax); 82157476af
```
